Risk Assessment for Construction Designers

April 2006

DRA

DESIGNED FOR

The Construction (Design and Management) Regulations are 10 years old, but according to the Health and Safety Executive there is plenty of evidence that the designer aspects are still not working well. HSE research shows that designers are still failing to exploit the potential they have to eliminate and reduce risks on site.

This course is designed for designers working on construction projects who are looking for a better understanding of their duties and a way of working that maximises their effectiveness whilst minimising bureaucracy and paperwork.

COURSE OBJECTIVES

By the end of this course delegates will know their duties as Designers under the Construction (Design & Management) Regulations and will be able to identify, assess and control health and safety risks in designs for construction work and create a record of the process.

COURSE CONTENT

- ✓ Designers duties under the current CDM Regulations
- ✓ Changes to the CDM Regulations (Confirmed Spring 2007)
- ✓ The Management of Health and Safety at Work Regulations
- ✓ Design risk assessment on construction projects
- ✓ Hazards, risk and risk control solutions
- ✓ Incorporating design risk assessment into the design process
- ✓ Effective recording and communicating of actions and residual risk

COURSE DURATION

This is a 1 day course. We can however also organise an abbreviated 1/2 day course for companies which can be held at our training facilities or in house.

FEES

Interbuild Show Special £99 + VAT per person incl. lunch, light refreshments and course materials.

Our in-house training courses start at £50 + VAT (£58.75) per person with a minimum of 6 and a maximum of 20 people per course.
